Younes Sghyer

Data Scientist & Data Analyst | Quantitative Analyst

Rabat, Morocco · +212 624694039 · sghyeryounes@gmail.com · linkedin.com/in/younes-sghyer

PROFILE

Data scientist and quantitative analyst who builds data-driven systems that turn noisy financial and insurance data into decisions. MSc Financial Engineering candidate (WorldQuant University) with published research on volatility modeling and market regime detection. Currently leading IT and data at an insurance brokerage, where I designed and shipped analytics apps, automated reporting and pricing tools used daily by the business.

EXPERIENCE

IT Lead | Data Analyst & Full-Stack Developer (Insurance Analytics) Mar 2026 – Present
CPA – Conseil et Placement d'Assurances · Rabat, Morocco

- Designed and built a locally hosted full-stack claims analytics web app (Python, FastAPI, Pandas, Chart.js) that reads the shared claims file live and classifies every dossier as settled or unsettled using 7 business rules defined with the claims department.
- Automated PDF reporting for claims handlers, the Director General and agents (3 report types), identifying the party blocking each case and escalating urgent dossiers, replacing manual follow-up.
- Built a locally hosted fleet motor insurance pricing simulator that reproduces the contract's Excel model across 4 coverages plus taxes, with user login, admin panel, printable quotes and Excel export.
- Built an Excel workbook linking workers' compensation PEC stock with the claims file by policy number, with rules to detect PEC consumption, a one-click client search and low-stock / overuse notifications.

Data Analyst Augmented by AI (Program) Oct 2025 – Feb 2026
Groupe Holmarcom – JobIntech · Morocco

- Built interactive Power BI and Tableau dashboards turning business data into clear reporting.
- Cleaned, transformed and modeled data with SQL and Python on Microsoft Azure, using AI tools to speed up analysis and documentation.

Quant & Data Scientist (Remote) Jun 2024 – Jun 2025
FinTech Fusion · Saudi Arabia (remote)

- Designed and backtested algorithmic trading strategies on crypto and DeFi markets using machine learning and technical indicators.
- Built custom technical indicators and signal-generation logic in Python for automated execution.
- Developed risk management rules (position sizing, stop-loss logic, drawdown limits) and analyzed strategy performance before deployment.

Web Developer 2022 – 2024
Freelance · Morocco

SKILLS

Data & Programming : Python · SQL · Pandas · JavaScript · Machine Learning · Deep Learning · Statistical Analysis · Data Analysis · Data Visualization · ETL

BI & Tools : Power BI · Tableau · Business Intelligence · Excel · VBA · Automation · Azure

Quantitative Finance : Financial Engineering · Financial Econometrics · Time Series Analysis · Stochastic Modeling · Quantitative Analytics · Risk Management · Derivative Pricing · Algorithmic Trading · Trading Strategies

Industry & Development : Insurance · FastAPI · Full-Stack Development

RESEARCH

- EGARCH vs GJR-GARCH: modeling Bitcoin (BTCUSDT) futures volatility and leverage effects.
- Hidden Markov Model regime detection for adaptive trading systems, improving signal accuracy and risk management.

EDUCATION

MSc Financial Engineering – WorldQuant University Aug 2024 – Present
Derivative pricing, stochastic modeling, portfolio theory, risk management, ML in finance. Global Alumni Ambassador for Morocco.

Data Science Summer Program – Data Science & AI – Hertie School (Berlin) Aug 2025

Summer School – Blockchain & Decentralized Finance – University of Zurich Jul 2023

Bachelor's degree, Computer Science / Information Systems Engineering – Sup MTI 2022 – 2023

Diploma, Software Engineering – École Supérieure Vinci 2020 – 2022
